

THE GREAT BARRIER REEF

As part of its Diamond Jubilee Celebrations, the Department of Zoology organized a Special Lecture on 'The Great Barrier Reef' on the 5th of January, 2017. The speaker of the day was Ms. Jessica Gnanadickam, Advisor, Professional Development of Biology Teachers, Sydney Catholic Schools, Sydney, Australia and former faculty of the Department of Zoology. Ms. Gnanadickam spoke about the world's largest coral reef system and the myriad creatures that call it home. She also gave the audience an idea of the threats faced by this fragile ecosystem and what we can do to save this magnificent, natural architectural wonder off the coast of Queensland.
