

CREATIVE DESIGN

Creating designed products has long been a part of the curriculum in the Fine Arts department. This year the final year PG students of Economics, English and Mathematics enrolled themselves in an elective course on Creative Design which gave them an exposure to not just design elements but also helped them to create articles using materials as diverse as glass, paper and fabric. The students painted pots and made fabric coasters, stained glass chimes, folders designed with paper and the pièce de résistance, magnets made using materials found on campus as part of our recycling and upcycling efforts! These artworks were all testimony of the students, from such varied backgrounds with little or no exposure to art and design, developing a visual aesthetic. Eventually the students displayed their works and expressed joy and fulfilment in exploring their burgeoning artistic skills.
